Budapest, Dec. 21. 1989.

Dear John,

Thank you very much for your kind letter, the seasons greetings and the invitation to Toronto.

It would be a great honour for me to go to Toronto. I am sure that Podwinska also would be glad to have such a possibility. I will send her a copy of your letter and I try to call her by phone. Enclosely I send you her address too.

Dear John,

Thank you very much for your kind letter, the seasons greetings and the invitation to Toronto.

It would be a great honour for me to go to Toronto. I am sure that Podwinska also would be glad to have such a possibility. I will send her a copy of your letter and I try to call her by phone. Enclosely I send you her address too.

We do TPI testing too, but we have T. pallidum Budapest strain. There was only a little difference between Nichols and Budapest strain. We do demonstrated it on rabbits and Bill Duncan in CDC (Atlanta. Ga.) in 1974. was able to demonstrate on FTA-abs reactivity in one human sera. Our studies in vitro cultivation of patogenic treponemes was made on Tp. Budapest strain also. It was isolated by K. Király in 1953.

Many years ago the lymphocyte transformation test also was made with Tp Budapest antigenes. The results were not published because of Király, my previous boss did not belived it. Later, after the Turk's publication I was not interested to publish the results, because our results were the same only some years earlier. The reaction
